Mumble Client How-To

This is the 5th dialog box you will see after starting the Mumble client for the first time. Accept the defaults on the first four dialogs. In this dialog select "Push To Talk" and press the keyboard combination you prefer to use when you want to speak. I use "Control + z".

Ŧ	Audio Tuning Wizard	×
Voice Activity Detect Letting Mumble fig	tion jure out when you're talking and when you're silent.	
This will help Mum	ble figure out when you are talking. The first step is selecting which data value to use.	
O Push To Talk:	Control_L + z	
Raw amplitude	e from input	•
Signal-To-Nois	e ratio	
Next you pood to a	divet the following slides. The first forwatterapses you say should and up in the areas area	
(definitive speech)	. While talking, you should stay inside the yellow (might be speech) and when you're not talking,	
everytning should	be in the red (derinitively not speech).	
	< <u>Back</u> <u>N</u> ext > Cancel	

The next dialog you need to select "Disable Text-To-Speech and use sounds instead. Accept the defaults for the remaining dialogs until the wizard is finished.

-	Audio Tuning Wizard	×
Quality & Notificati Adjust quality and	i ons d notification settings.	
Quality settings		
○ Low	In this configuration Mumble will use a low amount of bandwidth . This will inevitably result in high latency and poor quality. Choose this only if your connection cannot handle the other settings. (Speex 16kbit/s, 60ms per packet)	
O Balanced	This is the recommended default configuration. It provides a good balance between quality, latency, and bandwidth usage. (CELT 40kbit/s, 20ms per packet)	
🔿 High	This configuration is only recommended for use in setups where bandwidth is not an issue, like a LAN. It provides the lowest latency supported by Mumble and high quality . (CELT 72kbit/s, 10ms per packet)	
Notification sett	ings	
O Use Text-	To-Speech to read notifications and messages to you.	
Disable Te	ext-To-Speech and use sounds instead.	
Keep cust	tom Text-To-Speech settings.	
	< <u>B</u> ack <u>N</u> ext > Cancel	

Next, select the "Server" drop-down menu and then select "Connect". Next click on "Add New...".

The last step is to select the "Configure" drop-down menu and then select "Settings". The dialog window below will be shown. You will need to slide the "Compression" slider to the left until it is around 31.0 kb/s and the Speex codec is being used. Select "Apply" and you are now ready to start using Mumble.
